WIRELESS AUDIT

Aim:

To perform wireless audit on Access Point and decrypt WPA keys using aircrack-ng tool in Kalilinux OS.

Algorithm:

- Check the current wireless interface with iwconfig command.
- Get the channel number, MAC address and ESSID with iwlist command.
- Start the wireless interface in monitor mode on specific AP channel with airmon-ng.
- If processes are interfering with airmon-ng then kill those process.
- Again start the wireless interface in monitor mode on specific AP channel with airmon-ng.
- Start airodump-ng to capture Initialization Vectors(IVs).
- Capture IVs for atleast 5 to 10 minutes and then press Ctrl + C to stop the operation.
- List the files to see the captured files
- Run aircrack-ng to crack key using the IVs collected and using the dictionary file rockyou.txt
- If the passphrase is found in dictionary then Key Found message displayed; else print Key Not Found.

Output:

```

root@kali:~# airmon-ng start wlan0

Found 2 processes that could cause trouble.
If airodump-ng, aireplay-ng or airtun-ng stops working after a short period of time, you may want to kill (some of) them!
